

A Catalyst for Change in Colorado

Location
Denver, Colorado, USA

Wall Products
Optimo

Finish
Pewter

Overview

Catalyst Health-Tech Innovation is a blend between a co-working space and a healthcare innovation ecosystem. It was created to be an industry integrator, bringing together major healthcare systems, doctors, universities, non-profit groups and startups to foster partnerships, communications and solutions to common challenges.

Wall Products Optimo

Building for “Serendipitous Collisions”

The seven-story, 190,000 square-foot building was designed by The Beck Group. The design was intended to create what they call “serendipitous collisions”.

A collision like this is an interaction where people from different companies exchange meaningful ideas. These interactions can take place in the building’s open atrium lobby, going up or down one of the wide staircases, in the community kitchen, working out in the fitness facility, taking in the view of the Denver skyline from a balcony, or grabbing a cup of coffee in the street-level café.

Historic Colorado Meets Modern Metal

The exterior of the building is described as blend of historic Colorado and chic, based on results from a 50-question survey sent to 500 people in the community.

Part of that industrial chic look includes the use glass, brick and insulated metal panels. More than 14,000 square feet of Kingspan Optimo Wall Panels finished in pewter were used on the Catalyst HTI exterior. Optimo architectural panels deliver a flat, modern look while meeting the demand for a high-performing building envelope. They are GREENGUARD Gold certified and can now be ordered with QuadCore Technology, Kingspan's next generation of self-blended hybrid insulation core.

Creating a Distinctive Design with Insulated Metal Panels

More architects are discovering that insulated metal panels can be an integral part of a distinctive, modern aesthetic, while contributing to thermal performance, speed of build and an extended building life cycle. Performance is an important element for the Catalyst HTI owners, as they are pursuing WELL certification for the building.

Catalyst is a hub in Denver's bustling River North District, an area rich with businesses, restaurants, artist studios and more. With insulated metal panels a key part of its aesthetic, Catalyst HTI stands out as an innovative, chic addition to the neighborhood.
