

# Certified partners, always at hand

## Certified partners, always at hand

Certified Partners are professional companies with a high degree of expertise and considerable experience in daylight constructions, ventilation and/or smoke and heat extraction. Every Certified Partner is familiar with the current, local legislation of the country in which they are based. Currently our partner network stretches across around 53 countries. There is almost certainly a partner in your area.

Reliable solutions by testing, improving and certification

“Never Compromise.  
Always Innovate”

## Functional and sustainable solutions

In addition to functionality, sustainability is becoming increasingly important, at every level. Building users and clients set high requirements for the quality of indoor climates. Inspired by nature, we are constantly looking for solutions that are even more intelligent, effective and energy efficient. And in addition to being sustainable, it's also important that these solutions save money!

# Let's create better buildings

## Optimised building solutions

A healthy internal building environment, including the supply of fresh air and quality daylight, is imperative to the well-being of building occupants. Safety is another vital building feature. We enable all of these key health and safety elements through our provision of daylighting, natural ventilation and smoke management solutions.

## Design support when you need it

Whether you are looking to maximise the benefits of natural light, bring fresh air into your building or source effective smoke management systems **We have the solution for you.**

We support consultants and architects with the validation and – if necessary – improvement of existing SHEV, daylighting and natural ventilation designs. We make our assessments critically, confidentially and discretely. Free of charge. Whether it be prescription-based or performance-based designs.
