

Quality Safety Environnement Policy

Isocab France by Kingspan is specialized in manufacturing, international sales and distribution of insulated panels for all sectors. Certified for several years in the field of quality according to the ISO 9001:2015 reference, this approach has been extended to health, safety and the environment across all our sites Grande-Synthe and Perpignan with obtaining OHSAS 18001:2007 and ISO 14001:2015 certifications in 2015.

Our business focuses on the manufacture of panels composed of two steel plates separated by polyisocyanurate foam (Grande-Synthe and Perpignan) or mineral wool at (Perpignan). Therefore, the issues related to health, safety and the environment are already a concern and we are continuously improving our QSE practices. This notably involves an individual and collective responsibility.

QSE

- Train and communicate to support and promote this politic, to incite individual and collective responsibility in order to improve QSE performance
- Commitment to continuously improve the QSE, setting objectives to be reached and to review them periodically during management review.
- Honour current laws and any other requirements from any field.

Safety

- Commitment to protect the physical and moral integrity of our staff and partners through a prevention management system (OHSAS 18001:2007).
- Reduce to zero the number of accident with work stoppage and highly decrease the number of benign accidents.
- Each employee must take care to ensure their own safety but also to ensure the one of the others in a proactive manner.

Environment

- Engage in a process of continuous improvement of the environment's protection with reduction and prevention of pollution through a management system ISO 14001:2015.
- Commitment to reduce water consumption and to involve employees to restrict it.
- Reduce our greenhouse gas emission and pollution in general.

Quality

- Ensure the best quality practices in accordance with the ISO 9001:2015 norm.
- Identify and eliminate client claims.
- Employees have to get involved into quality practices.

To support this approach and all *Kingspan's* policies (Energy, Planet Passionate strategy...), the Management is committed, to implement the means to promote the continuous improvement of the safety, quality and environment management system, but also to support the involvement and active participation of all staff.
